

# DISCOVER YOUR OWN SPECIES

This week we've learnt all about birds. We've looked at their life cycles, listened to their calls and songs, moved like them and learnt about hunting, camouflage and what they have to do to find a good home!

Now, it's time to use all of this new information to create your very own species!

Maybe it was discovered in the depths of the Amazon jungle, or it flew down from the Appalachian mountains. Or maybe you just came across it in Epping Forest!

Create a unique call and style of movement.

We should be able to tell where the bird lives by how it moves and communicates.

For example, when it's hot, animals often move more slowly.

We should also be able to tell the bird's place within the food chain - does it hunt? Or does it peck? How does it show off?

Think up a name for your bird!

How did it pose the very first time it was caught on film?
