

YOUR HOME IS YOUR ISLAND

Each landmass has lots of different habitats within it, each with a different terrain (which means what the ground is made up of) and set of wildlife.

For example, on an island there might be a cliff, made of craggy rock, a jungle, with lots of uneven roots running through soil and a beach, made of soft sand.

Each of these will have different mammals, insects and so on, depending on where they find it easiest to live!

YOUR HOUSE IS YOUR ISLAND!

Find each area of Adventure Island around your house! The stairs might be a mountain, the kitchen sink might be a watering hole, the living room might be a forest!

Now it's time to explore! What type of terrain does each area have? What type of wildlife? Start figuring out the geography of Adventure Island.

You can show us your explorations on our shared gallery! We want to see your discoveries.
