

# REDUCE REUSE RECYCLE!

How does the recycling work where you live?

## WHAT IS RECYCLING AND WHY DO WE DO IT?

All the rubbish we throw away can harm the environment. Recycling things instead of putting them in the bin is one of the most important things we can do to protect the world around us.

When we recycle rubbish, it is converted into reusable material and can be used to make new things!

What things can be recycled in your area? Do some research, ask an adult and find out everything you can about recycling where you live.

Then write a quiz to test your family's knowledge!

Show off everything you've learnt! Share your quiz on our gallery!
